## Programming languages

JavaScript TypeScript  
Node.js Vue.js React.js  
Java Spring Boot PHP  
Python Pandas Perl  
HTML5 CSS3 Bash

## Practices and methodologies

Test-Driven Development  
Behavior-Driven Development  
Pair Programming  
Trunk-based Development  
Continuous Integration  
Continuous Delivery  
SOLID Principles  
Clean Architecture  
Domain-Driven Design  
Experimental Design  
On-call Support  
Service Levels DevOps  
Site Reliability Engineering  
Infrastructure as Code  
Observability

## Professional Experience

### Senior Consultant Developer, Thoughtworks

*Technology consultancy. Software engineering.*

*Barcelona, Oct 2020 - Present*

- Delivered projects and learned the domain for multiple industries including non-profit, energy, medical innovation and online marketplaces.
- Took on a wide range of roles and responsibilities. From full-stack development to on-call SRE, as Individual Contributor and Tech Lead or Engineering Manager.
- Led the technical direction of a 6-person team and encouraged the growth of its members, increasing involvement in backlog definition and reducing knowledge silos.
- Defined our team roadmap in coordination with the Product Manager and aligned our priorities with other teams' managers.
- Helped new and existing teams in the adoption of practices such as Pair Programming, Test-Driven Development (TDD), Trunk-based Development and Continuous Delivery.
- Developed customer-facing web features following an experimentation approach, using metrics and user interviews to validate hypotheses and guide efforts in feature development.
- Designed and developed a flexible workflow of data manipulation processes, which enabled adding and removing experimental features without impacting the user experience.

JavaScript, TypeScript, Node.js, Vue.js, Java, Spring Boot, Python, Pandas, AirFlow, AWS, AWS CDK, Terraform, Datadog

### Consultant Developer, Thoughtworks

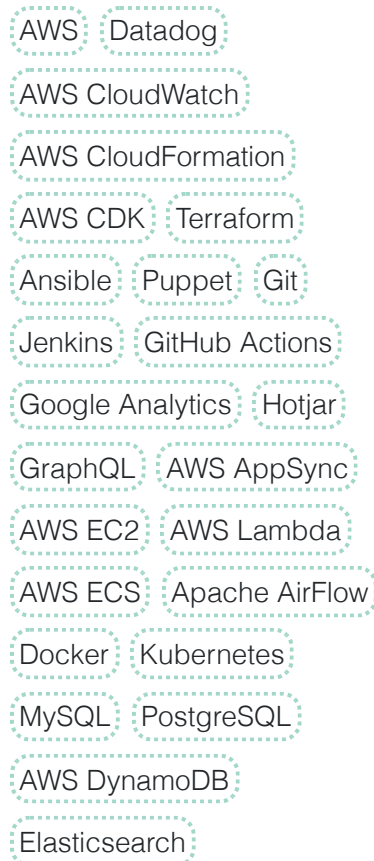

*Technology consultancy. Software engineering.*

*Barcelona, Jan 2018 - Oct 2020*

- Maintained infrastructure and covered on-call for 250 production services, then guided development teams to adopt DevOps and Observability practices in order to manage them on their own.
- Facilitated multiple workshops on how to define Service Level Objectives and identify alerting criticality for different services.
- Maintained platform infrastructure such as Kubernetes and Elasticsearch clusters for compute and logging purposes respectively, while identifying points of improvement and cost reduction.
- Built platform tooling to help development teams handle their AWS resources and Datadog monitoring using Infrastructure as Code.
- Built and published a mobile application using cryptographic protocols for low-scale electronic voting.
- Developed backend services integrating the components of a personal data protection platform built in partnership with multiple european companies.

JavaScript, TypeScript, React Native, Python, AWS, AWS CloudFormation, AWS CDK, Kubernetes, Elasticsearch, Datadog

## Software Engineer, CAPSiDE

Cloud infrastructure consultancy. Internal and product development.  
Barcelona, Jan 2016 - Jan 2018

- Developed web products used both internally and by the company's clients to manage the deployment of multiple cloud infrastructure stacks and perform blue/green application deployments for both AWS and Azure.
- Developed internal web tooling that handled sales offers, request ticketing, time tracking and scheduling.
- Advocated for the adoption of software design concepts such as SOLID principles, design patterns, architectures and Domain-Driven Design.
- Promoted software quality and maintainability principles such as code readability, refactoring, extensive testing and Test-Driven Development.
- Performed internal trainings in order to introduce some of the previous concepts to the team.
- Defined a frontend code architecture that separates application and framework-coupled logic, allowing the application to easily adapt for the fast-changing JavaScript ecosystem.
- Optimized the development environments so they were easier to use, more automated and consistent with production.

Perl, Node.js, AngularJS, Vue.js, Elasticsearch, AWS, Azure, Ansible, Docker

## Adjunct Lecturer, La Salle Campus

Engineering university. Computer Engineering department.  
Barcelona, Oct 2015 - Feb 2016

- Introduced students to web development using HTML5, CSS3, JavaScript and PHP.
- Guided students in the setup and use of a development environment using Vagrant, Apache, MySQL and Git.

JavaScript, PHP, HTML5, CSS3, Git, Vagrant, Apache, MySQL

## Teaching Assistant, La Salle Campus

Engineering university. Computer Engineering department.  
Barcelona, Sep 2012 - Sep 2015

- Introduced students to web development using Apache, MySQL, PHP frameworks and version control.
- Guided and evaluated the development of a web application as part of their group project.
- Introduced students to the basics of computer programming using C language and the use of the Linux command-line.
- Participated in the drafting of subject materials.

JavaScript, PHP, HTML5, CSS3, C, Bash, Git, Apache, MySQL

## Intern, T-Systems Iberia

IT services and consulting. Automation and tooling department.  
Barcelona, May 2013 - Jun 2015

- Developed cross-browser internal web applications that implied a noticeable performance improvement in some of the company departments.
- Reduced the time needed to analyze the servers status and draft monthly reports on an estimation of 12 hours per month.
- Automated the installation of monitoring agents and managed monitoring and data integration tools.

JavaScript, PHP, Zend Framework, Bash, Pentaho, IBM Tivoli
